

- 1) Nerds are not your only people; or, don't date that guy
- 2) See a doctor
- 3) Public, secret, and data's incorrigibility
- 4) ASCII and sovereignty
- 5) "What's holding this up?"
- 6) Offer a taste or a script
- 7) Automation can do more than you think
- 8) People keep dying
- 9) You will get fluent in programming (but not in 1998)
- 10) Go where the cognitive surplus is
- 11) Describe more than you prescribe, and watch out
- 12) Marketing doesn't have to be gross
- 13) "Gift economy of attribution" has landmines
- 14) Liberty is not enough
- 15) FLOSS people aren't all like Seth Schoen
- 16) Maintainership doesn't have to be monolithic
- 17) "Enlightened self-interest" vs. infrastructure
- 18) "Patches welcome" needs to be invitation, not intimidation
- 19) Your teachers don't respect you
- 20) Different people learn differently
- 21) Social infrastructure work is in-credible
- 22) Your obliviousness protects you
- 23) Prejudice, caches, and the power of embarrassment
- 24) Rumpelstiltskin fallacy
- 25) Cookie-licking and plins
- 26) Freedom, safety, and opsec
- 27) Optimal level of criticism is not zero
- 28) The long joy of empowering yourself & others
- 29) The bug tracker vs. the 10x programmer
- 30) Clarity > accuracy, relationships > purity
- 31) Respecting people means accepting mystery
- 32) To be responsible is to be small-c conservative
- 33) No one is Yudhishtira
- 34) Socially constructed things are real (and hard to change)
- 35) Noisy failure vs. the dog that didn't bark
